CORE SKILLS

Product Roadmap Management, Backlog Prioritization, Master Data Management (MDM), Release Planning and Coordination, Agile Product Ownership, User Story and Acceptance Criteria Definition, Data Integration Oversight, Non-Functional Requirements Specification, Automation of Data Processes, Risk and Dependency Management, Cross-Functional Team Collaboration, Data Product Leadership, Data Analysis, Data Architecture, Data Warehouse Design, Snowflake, AWS, Oracle, AI Tools, Kiro

CERTIFICATIONS

AWS Cloud Practitioner, Amazon Web Services

Certified Scrum Product Owner (CSPO), Scrum Alliance

Snowflake SnowPro Associate: Platform, Snowflake (Valid until 2028)

PROFESSIONAL SUMMARY

Technical Program Manager and Data Product Owner with over 10 years of experience leading enterprise data solutions. Skilled in roadmap management, agile delivery, data governance, and hands-on SQL validation, leveraging Snowflake and AWS to deliver scalable, secure, and analytics-ready data products.

WORK EXPERIENCE

- Ouro Global2024–Present

Technical Program Manager

 - Owned the product roadmap and backlog for enterprise data products, prioritized features by business value, and aligned releases with strategic KPIs and stakeholder requirements
 - Led data ingestion and integration efforts by gathering metadata and data samples, ensuring lineage capture, and implementing secure, scalable architecture
 - Managed dependencies, risks, and delivery timelines across engineering, QA, and business teams; proactively identified blockers and secured cross-team resolutions to maintain release schedules
 - Piloted automation using Snowflake Document AI to streamline the return-of-funds workflow, reducing manual steps and enhancing operational consistency
 - Implemented data quality rules, scorecards, and regression validation playbooks; automated checks to significantly reduce post-release data defects
 - Executed hands-on SQL profiling and source-to-target mapping to validate transformations, detect anomalies, and ensure accuracy prior to production deployment
 - Collaborated with business SMEs, architects, and integration teams to translate business questions into BRDs, user stories, and detailed acceptance criteria, maintaining end-to-end traceability in Jira and Confluence
 - Designed dimensional schemas and curated datasets (star/snowflake), collaborating with data engineers to deliver analytics-ready models for BI tool consumption
- Global Payments Inc.2016–2023

Agile Product Owner – Enterprise Data & Back Office

 - Directed product vision, roadmap, and backlog for enterprise data applications and warehouse platforms, prioritizing tasks based on business value and strategic alignment
 - Defined and communicated MVPs and release criteria for data products, encompassing non-functional requirements such as performance, security, lineage, and scalability
 - Facilitated backlog grooming, sprint planning, refinement, retrospectives, and release planning to ensure alignment between engineering and analytics each sprint
 - Led design reviews, product demonstrations, and release-readiness assessments while coordinating production validation and securing stakeholder sign-off
 - Collaborated with data engineering, BI, and application teams to implement dimensional models and analytics-ready datasets, ensuring solutions were secure, performant, and production-ready

- Performed hands-on SQL validation and data profiling to verify datasets, troubleshoot anomalies, and approve source-to-target mappings prior to promotion
- Led story-mapping workshops to define MVP scope, balance speed and scalability, and develop releasable increment plans that achieved measurable business outcomes

NetSpend Corporation

2014–2016

Support Delivery Manager – Back Office Systems

- Directed operational backlog and on-call rotations for enterprise data and back-office systems, enforcing SLAs/OLAs to maintain 99.99% production availability
- Led incident triage and cross-team war rooms for data pipeline, integration, and reporting outages, driving timely remediation and stakeholder communication
- Directed root-cause analyses and ensured corrective actions reached closure, reducing recurrence of major incidents and enhancing RCA closure rates
- Implemented Kanban for support backlog management, reducing MTTR by approximately [35%] and increasing throughput for high-priority fixes
- Coordinated release support for ETL pipeline updates, data warehouse schema changes, and application deployments by planning cutovers, smoke tests, and rollback procedures to minimize downtime
- Developed and maintained runbooks and production validation playbooks for post-release verification and sign-off
- Implemented automated data reconciliation checks and alerts using Splunk monitoring, enabling early anomaly detection and enhancing trust in operational reports

NetSpend Corporation

2009–2014

Senior Application Analyst – Oracle ERP & Data Systems

- Designed and delivered ERP-based payment card processing and analytics solutions using Oracle Financials by translating business requirements into technical designs and dataset definitions
- Partnered with integration teams to onboard external feeds by gathering metadata and sample payloads, and documenting interface requirements to ensure reliable ingestion
- Optimized schemas and ETL flows to enhance transaction throughput and reporting performance, accelerating month-end closes and improving operational reporting reliability
- Implemented reconciliation processes and automated data checks to detect and remediate payment processing discrepancies, reducing recurring errors and exception volume
- Led stakeholder demos and training sessions, developing user guides and runbooks that accelerated adoption and reduced support requests
- Developed source-to-target mappings and ETL specifications to populate reporting marts, validating transformations through hands-on SQL and PL/SQL testing
- Engineered custom Oracle ERP extensions to support emerging business needs, enhancing system flexibility and reducing manual interventions
- Collaborated with cross-departmental teams to integrate third-party data sources, expanding analytics capabilities and improving decision support

SmartDog Services LLC

2008–2009

Application Functional Analyst

- Served as subject-matter expert and primary liaison between business stakeholders and delivery teams for multiple Oracle ERP implementations across diverse industries, ensuring technical solutions aligned with business needs
- Delivered product demos, trained stakeholders, and developed user guides and runbooks to drive adoption and reduce post-go-live support volume
- Defined source-to-target mappings and developed data dictionaries for ERP-to-DW integrations, collaborating with integration teams to capture metadata and sample payloads for reliable ingestion
- Facilitated requirements workshops and process discovery sessions, capturing BRDs, functional specifications, and end-to-end process flows to inform solution design and data requirements
- Coordinated cutovers and post-production support during go-lives by owning escalation paths, mobilizing cross-functional teams, and ensuring timely incident resolution
- Validated data extracts and reports by performing hands-on SQL/PL-SQL profiling to ensure accuracy of financial and transactional feeds used in analytics and reconciliations

RJT Compuquest

2006–2008

Oracle Application Analyst

- Led requirements gathering and gap analyses with stakeholders, recommending configuration over customization to minimize technical debt and accelerate delivery
- Managed end-to-end UAT cycles by developing test plans, coordinating test data and user groups, capturing defects, and driving resolution with engineering and business stakeholders
- Developed user guides and playbooks and trained business users to accelerate adoption and reduce post-production support
- Configured and documented multiple Oracle ERP financial modules to meet business and compliance requirements by producing BRDs, functional specifications, and configuration runbooks
- Collaborated with Oracle support and third-party vendors to implement patches, data fixes, and emergency changes while maintaining audit trails and change approvals

EDUCATION

Saint Edward's University, TX

Master of Science in Computer Information Systems

St. Cloud State University, MN

Bachelor of Business Computer Information Systems
